Web Developer

I'm a builder at heart. I use technology and logic to solve business problems that matter.

My current focus is helping teams find efficient ways to connect software, natively or via custom APIs, to cut out repetitive tasks. Along the way, I've sharpened my skills with AI models, including LLM agents, modern web frameworks, and cloud infrastructures that make solutions scale.

Though my roles have changed—from remote operations manager to web developer—my core drive remains the same: leave every system stronger than I found it.

WORK EXPERIENCE

OnFrontiers • Remote

11/2017 – Present

Director of Service Operations

- I apply agile product development to build internal solutions—AI prompts, Node.js serverless apps, HubSpot API integrations, and automated workflows—so everyone can get more done with less effort.

Head of Research Operations

- I oversaw marketing automation and data enrichment for a global expert marketplace. We delivered high-end B2B client service while designing lead-gen campaigns and onboarding experts (B2C).

Senior Research Manager

Research Manager

- Identified top experts to meet client needs, ensuring high-quality insights. Oversaw each engagement—scoping requests, vetting experts, and managing logistics.

Tres Colinas • Franca, São Paulo, Brazil

06/2016 – 11/2017

Founder

- Founder of a venture aimed at revolutionizing the fast-casual food sector in Brazil, from securing initial seed funding to validating the Minimum Viable Product (MVP).

PROJECTS

A React portfolio website template for Web Developers

02/2025 –
04/2025

Open source

I was inspired by the open source community and built my own project based on an existing open source repository. I refocused it to emphasize the projects and added best practices for web portfolio design.

SKILLS

- Back-End Web Development
- Express.js
- JavaScript
- Node.js
- Open AI
- Postgres
- PostgreSQL
- Python (Programming Language)
- React.js
- Remote Team Management
- REST APIs
- SQL
- Zapier

EDUCATION

Certificate in Web Development

TripleTen
12/2024 – 07/2025

Certificate in in Back-End Engineering

Codecademy
Remote
03/2024 – 12/2024

Applied PM Specialization in Project Management

Coursera
01/2017 – 08/2017

Bachelor of Business Administration – BBA in Business Administration and Management, General

St. Thomas University

An LLM agent application that automates operations

02/2024 -
03/2025

OnFrontiers

I'm on a tiger team automating expert matching from internal and external databases. I lead product development—validating premises, setting priorities, and managing releases—with our app running locally via LLM API calls.

Resume parser from Json to CSV

01/2025 - 01/2025

OnFrontiers

I built an ethical LinkedIn profile parser that accepts a profile URL, calls the Bright Data API (costing less than 20% of a cent per profile) to retrieve public data without scraping, and outputs a CSV formatted exactly to our database needs. It's a Node.js API deployed on Vercel.

A Hubspot chatbot connected to OpenAI

09/2024 - 10/2024

OnFrontiers

This prototype automated our chat system using HubSpot's chat API. We built a Node.js backend deployed on Render that integrates with HubSpot, leverages ChatGPT for responses, and uses a custom chat widget to manage interactions and log data in the CRM.
